

Domino Profiles

- Perfect finish
- No welding
- No more screws
- Designed for the Domino Sign LED range

Letter Box Profile

- 2 heights (60 and 100mm)
- 35m Coil
- Raw Aluminium

Our profiles represent a major breakthrough in the field of Plexiglas face letter signs.

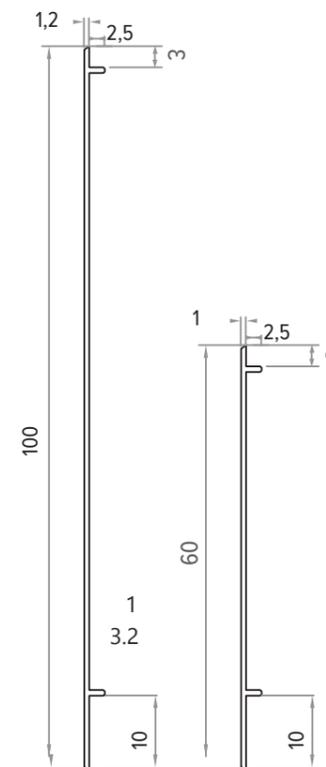

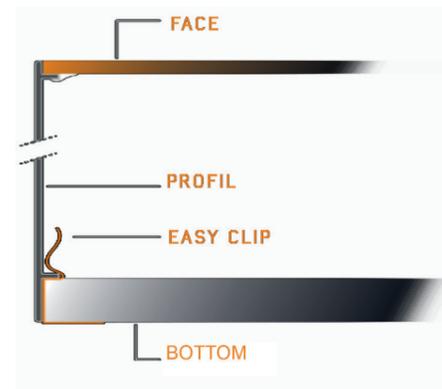

This innovative process, which combines productivity and impeccable finition, makes it possible to produce luminous Plexiglas-faced box letters without having to use either a listel for the faces or fixing screws for the backs.

The edge and the Plexiglas face are assembled by gluing (translucent glue) or by using the resin machine.

The whole unit can then be simply clipped onto the base using the specially designed stainless steel EasyClip for effective and discreet attachment.

The aluminium profiles, in different heights, have been specially designed to fit Domino Sign LED lighting modules.
